

# Searcher Seismic

Company Overview

## Who We Are

Searcher Seismic is an independent multi-client company providing high quality, non-exclusive seismic datasets and associated products to the global oil and gas industry.

**Headquarters:** Perth, Western Australia

**Other office locations:** Trondheim, Norway

### Our Mission

*To leverage our highly skilled workforce, strategic partnerships and leading technology to generate, operate and license high quality non-exclusive seismic projects that assist our customers to achieve exploration success.*

### Our Vision

*To be the global multi-client company most admired for its commitment to quality products, mutually beneficial partnerships and total customer satisfaction.*

## What We Do

Searcher's specialty is providing leading edge, non-exclusive seismic data that assists oil and gas companies to de-risk their exploration portfolios in a cost effective manner.

A thorough evaluation and understanding of the geological objectives for each project allows Searcher to consistently provide the most relevant and useful datasets for both regional and acreage evaluation workflows.

In all markets in which we operate, Searcher is a trusted and valued supplier of high quality non-exclusive seismic data and is renowned for being a leader in project generation and new ventures.

## About Andrew Weller

Andrew recently joined the Searcher team as the Sales and Business Development Manager, Asia Pacific. In this role, he is a trusted partner for a number of clients, liaising with them about their new ventures and exploration initiatives. After grasping a client's technical and operational environment, Andrew often finds opportunities for them to be more productive by helping to define and license the right data.

Prior to his industry experience, Andrew spent time in academia. He has received a B.Sc., M.Sc. and Ph.D. in Geology, which culminated in post-doctoral studies at the School of Earth Sciences at the prestigious Swiss Federal Institute of Technology, Zurich. Preceding Searcher, Andrew gained several years' industry experience with exploration and production service companies.

With both industry and academic experience, Andrew has a broad understanding of geoscience and the oil and gas industry. He has a versed ability to communicate with different people from different cultures and is a valued colleague to support your exploration ambitions.

## Our Global Data Library

The Searcher data library consists of a full range of products derived from both 2D & 3D reprocessing and 2D & 3D acquisition. Searcher's extensive experience in the management of seismic acquisition and processing in a variety of geological settings, makes us the data provider of choice for some of the largest oil and gas companies in the world.

## Oil Industry Snapshot

With global oil prices sliding over the past few months, there is some uncertainty in the oil and gas industry. This has left many to ponder what the future growth of the industry is and how quickly oil prices can bounce back. The million dollar question! With this apprehension, how can Searcher help you accomplish cost effective exploration?

- **De-risking exploration portfolios**  
Costing of a seismic campaign is distributed among several participants, which is more cost efficient than acquiring or reprocessing seismic data in house.
- **Business model flexibility**  
Being technology neutral with a thorough understanding of the geological objectives allows Searcher to act more like an oil company than a service provider, to consistently provide the most relevant and useful datasets for both regional and acreage evaluation workflows.
- **Solving exploration needs**  
Searcher excels at understanding the exploration program, responding to client's needs, ensuring they license the right data.
- **New ventures and project generation**  
Searcher is renowned for its multi-client project generation capabilities and has a constant flow of exploration ideas to assist our clients to evaluate, secure and explore acreage for oil and gas.
- **Prospectivity focussed solutions**  
Our multi-client projects are 100% focused on exploring acreage for oil and gas.
- **Client involvement and consultation**  
We pride ourselves on being considered as 'the new ventures team for your new ventures team'.
